DETAILED ACTION

Allowable Subject Matter

1. Claims 1-41 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 20 and 35, Cockerell, Jr. (US 4,698,781) teaches a method for synchronizing location finding measurements in a wireless network (see Title and Abstract), comprising: receiving transmissions from at least one transmitter at multiple receivers (see fig.1, wireless connection between multiple devices), wherein said multiple receivers are located at predetermined locations with respect to said at least one transmitter (see fig.1, stations 58 are located at predetermined locations), determining actual times-of-arrival of said received transmissions in response to said receiving (see column 1, line 60 to column 2, line 6, column 5, line 31 to column 6, line 6).

Vayanos et al (US 6,429,809) teaches estimating error in timebases of said multiple receivers in conformity with said second computed differences (see column 4, lines 41-46 and column 6, lines 47-65).

Cockerell and Vayanos, alone or in combination, fails to teach first computing differences between said actual times-of-arrival for said multiple receivers to determine actual time-differences-of-arrival for pairs of said multiple receivers, second computing differences between said actual time-differences-of-arrival and theoretical time-differences-of-arrival determined in conformity with said predetermined locations, and correcting measurements of other time-differences-of-arrival of other transmissions in

conformity with said estimated error.

Dependent claims 2-19, 21-34 and 36-41 are allowable for the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. MacDonald (US 5,732,354) teaches method and apparatus for determining the location of a mobile phone.

b. Atarius (US 6,356,608) teaches method and apparatus and system for determining a location of a frequency synchronization signal.

c. Lay (US 5,483,455) teaches method and apparatus for determining the location of a vehicle.
